

Project Worthiness Evaluation

Problem Definition

1. What specific problem is this solution intended to solve?
 - At the moment, I do not have a unified platform for demonstrating my proof of work, that is, the software solutions I have worked on for my clients.
2. Who exactly experiences this problem?
 - Myself.
3. How often does this problem occur?
 - It has always been there until now.
4. How is this problem currently being solved?
 - Currently I rely on talking about what I have worked on, or sharing my Github repo, which does not have demonstrations of my projects, except the projects themselves.
5. What are the main frustrations with the current solution?
 - Not everyone is a programmer and is interested in viewing source code, so unless I run the project I cannot show the interested person my proof of work.
6. What happens if the problem is not solved?
 - I will have to keep talking about the solutions I have worked on without easily demonstrating them by sharing my portfolio with the interested person.

Value Proposition

1. Does this solution increase revenue for me? If so, how?
 - There's a potential for it to increase my revenue, especially when I am able to win clients due to my proof of work on the website.
2. Does it reduce costs? If so, how?
 - No, instead it adds some hosting costs in order for it to be publicly available on the Internet.
3. Does it save time? If so, how?
 - Yes, because I no longer have to only talk about my proof of work, but can now easily show the interested person my portfolio.

Urgency & Demand

1. Is this solution a must have or a nice-to-have?
 - Its a must-have, because in order to market my skills and services I will be sharing the portfolio with my target market.
2. How urgently do I need this solution?
 - I need it as soon as I can finish it, so that I can then upload my projects for my next marketing.

Customer Commitment

1. Am I willing to spend money for this solution to be publicly available?
 - Yes.
2. How much am I willing to pay?
 - With my current financial state, it will depend on the monthly hosting costs.

Scope

1. What are the most important features I need the initial version of the solution to have that solves my problem?

- Log in
- Logout
- Add new project.
- Update project.
- View projects.
- Delete project.
